Introducing: The DiverselT Computer Repair & Training Center!

The technology ecosystem lacks diversity, yet the inclusion of people from different backgrounds would be a benefit for us all in the development of software, hardware, and applications. DiverselT Computer Repair & Training will be addressing these issues as a community resource offered by Adelante.

- **Cost-effective computer repair and support services provided to the public to address the “digital divide”**
- **On-the-job training, mentoring, and employment provided to people traditionally excluded from technology careers**
- **Computer training classes and workshops offered to the public**
- **Professional development for staff trainees including customer service skills and specific tech apps**

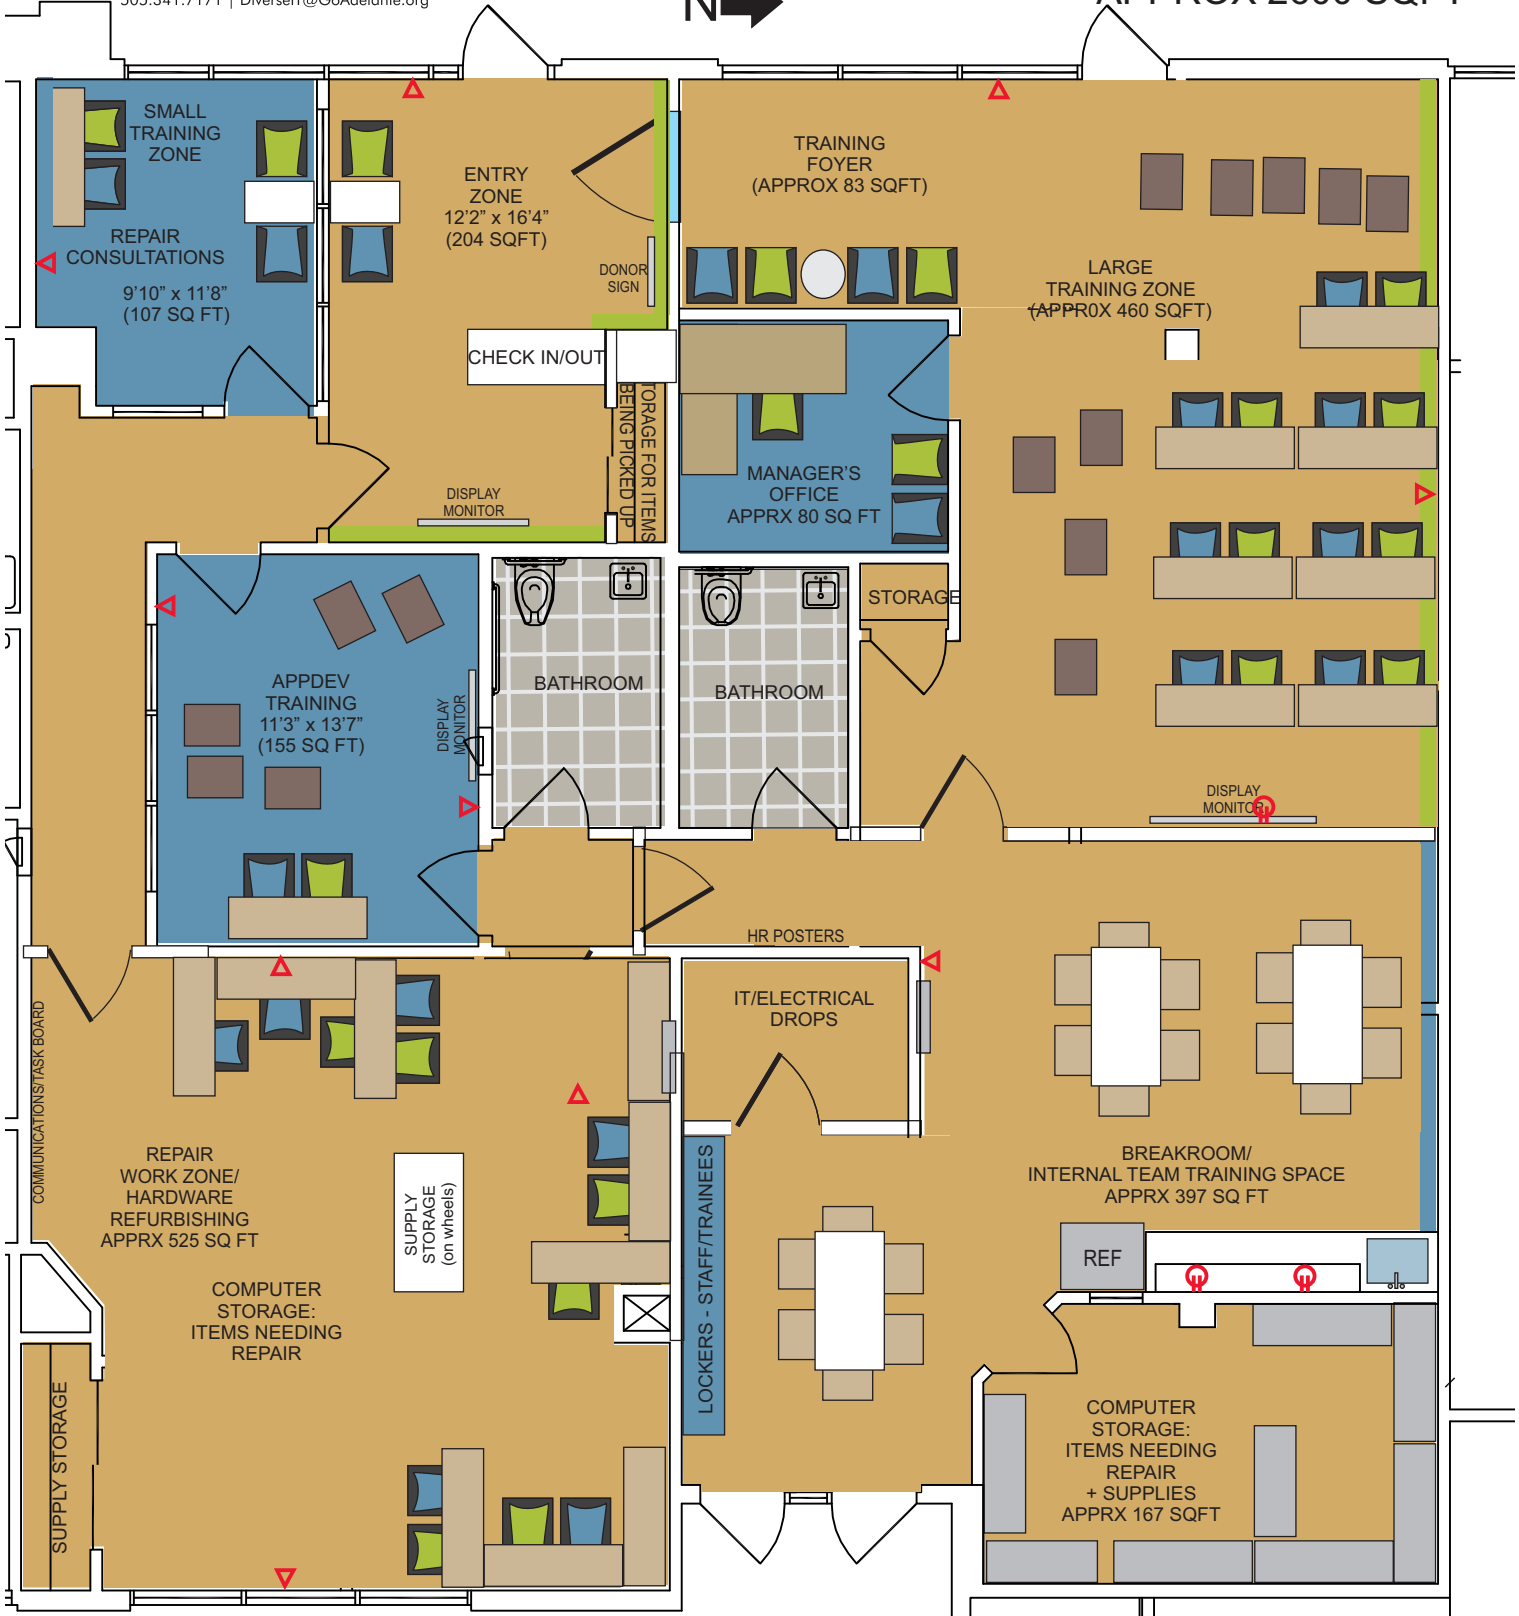

Building Our Newest Initiative

With your support, Adelante will be able to remodel, upgrade the electricity and IT infrastructure, and furnish the new DiverselT site.

Get Involved!

Adelante would greatly appreciate your support. You can help us make this new project possible by providing a financial gift. Adelante cannot operate DiverselT without your help. Together, we can create more IT opportunities for people with barriers to IT careers and provide reasonably priced options for repairs and training. Together, we will bridge the digital divide.
